ABOUT

Working with timber since 1989

Masif Pencere was founded in Fethiye in 1989 by İdris Çakal. What started as hands-on joinery is today backed by laminated timber and computer-controlled machinery. Our aim is simple: to bring the warmth of real wood into your home through windows and doors that last and are easy to care for. We measure, build in our own workshop and install with our own team — so we stay responsible for every step.

OUR PROCESS

01 Timber selection & drying

Selected timber is kiln-dried.

02 Three-layer lamination

Layers are pressed with opposing grain using moisture- and heat-resistant PVA D4 glue, so the timber won't twist, warp or move.

03 CNC machining

Profiles are cut on fully automatic machines with millimetre precision.

04 Protective finish

Wood-protective coatings prevent fading, cracking and blistering.

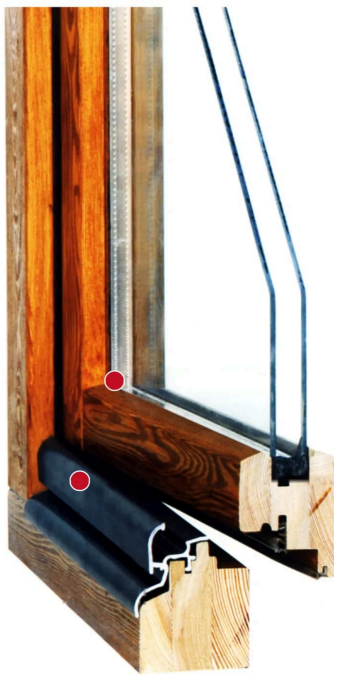

05 Installation

Our own team measures, fits and checks every unit.

WHY MASIF PENCERE

We solve timber's weak points with technology

Traditional timber windows tend to open up at the corners and rot along the bottom rail. Our system removes these problems at the production stage.

1 **Mortise-and-tenon corners**

Old-style 45° mitre joints loosen over time. Our corner joints are machine-cut without hand contact, so they stay tight for years.

2 **Aluminium drip rail**

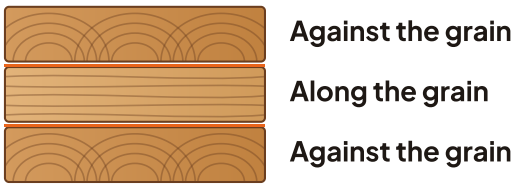

An aluminium drip rail on the bottom rail sheds rainwater away from the timber — removing the most common cause of rot.

3 **Double gaskets**

Two separate gaskets create a double barrier against water, dust, draughts and noise.

4 **Glass sealed on both sides**

The glazing is siliconed inside and out, so moisture can't get between glass and frame.

PVA D4

Three-layer lamination

Kiln-dried timber is pressed in three layers with alternating grain direction (against – along – against) using moisture- and heat-resistant PVA D4 adhesive. The result is a profile that doesn't twist, warp or lose its shape.

PRODUCTS

Our products

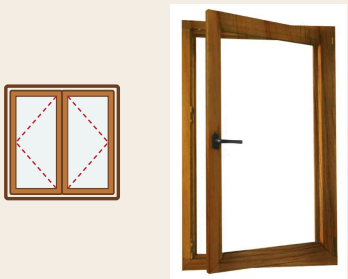

WINDOWS

Single-Sash Window

Ideal for bedrooms, bathrooms and kitchens. The sash opens inwards and can be specified with a tilt function for secure ventilation.

Bedrooms · Bathrooms · Kitchens · Stairwells

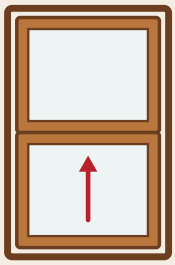

WINDOWS

Double-Sash Window

Brings generous light and airflow to living rooms. Available to suit both traditional and contemporary façades.

Living rooms · Stone houses

WINDOWS

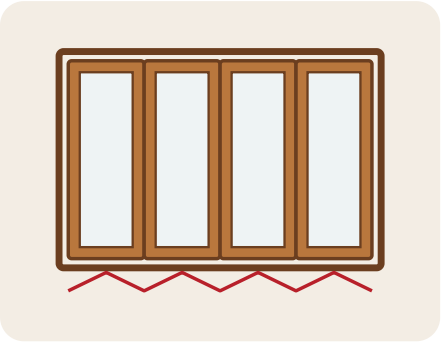

Guillotine (Sash) Window

A smart choice where swinging sashes aren't practical — balconies, terraces, cafés and restaurants. Nothing protrudes when open.

Balconies · Terraces · Cafés & restaurants

DOORS

Folding Door

A versatile balcony and living-room door. The leaves fold neatly to one or both sides, connecting your interior with the garden, terrace or view. The number of leaves and opening direction are planned around your opening.

Living room to terrace | Villas | Restaurants

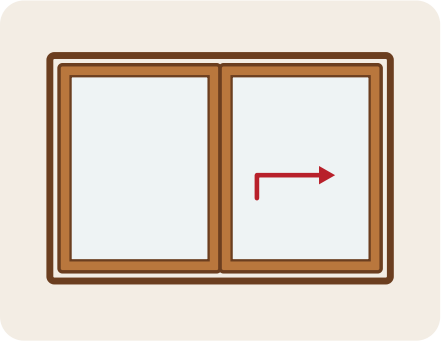

DOORS

Parallel Pull-Sliding Door

The leaf pulls out parallel to the frame and then slides sideways. When closed it seals tightly against the frame for good insulation.

Balconies | Terraces | Apartments

DOORS

Lift & Slide Door

Turn the handle and the leaf lifts slightly, gliding on its track with minimal effort; lower it and it seats firmly on its seals. The best choice for wide openings and sea-view villas.

Sea-view villas | Large living areas | Hotels

IN OUR WINDOWS AND EXTERIOR DOORS

— Three-layer laminated timber (PVA D4 glue)
— Aluminium drip rail
— Glazing sealed inside and out
— Made to measure
— Machine-cut corner joints
— Double gaskets
— Protective wood finish

DOORS

Fire-Resistant Hotel Room Door

We make fire-resistant timber interior doors for room entrances in hotels, aparthotels and guesthouses. Each door is built to your project's sizes and requirements, with survey, production and installation by one team. Our doors are EI 30 fire-resistance rated; the certificate is shared with your quotation.

Hotel rooms | Aparthotels | Guesthouses & boutique hotels

REGULATIONS

What do the regulations say?

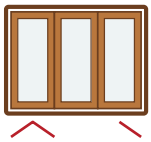

Under Turkey's Regulation on the Fire Protection of Buildings, hotel bedroom doors opening onto corridors must resist fire for at least 30 minutes and be fitted with a self-closing device. Our doors are EI 30 rated, and we confirm your project's requirements with you at quotation stage.
